- Upwork: <https://www.upwork.com/freelancers/~01d67a6a38050609ab>

Software engineer with 20+ years of programming experience and 10+ years of production Node.js development (since early 0.10 versions). Designed and implemented backend systems using Node.js and TypeScript, with strong emphasis on modular architecture, data modeling and maintainable service design. Experienced in evolving legacy systems and modernizing architecture across different stages of the JavaScript ecosystem. Also worked on practical frontend development, including internal dashboards, responsive UI and frontend-backend integration.

Core Technologies

Node.js TypeScript JavaScript (ES6+) React REST APIs OpenAPI (Swagger)

System architecture MySQL PostgreSQL MongoDB Redis Couchbase HTML5

CSS3 Tailwind CSS Responsive layout Browser APIs Docker CI/CD Internal tooling

Architecture & System Design

- Design of modular architectures with clear separation of concerns
- API design and contract-driven development
- API documentation and contract definition using OpenAPI (Swagger)
- Database schema design and data modeling (SQL + NoSQL)
- Designing systems from scratch based on business requirements
- Technical decision making and architectural ownership

Fullstack Scope

- Built internal dashboards and management interfaces for operational workflows
- Implemented responsive layouts with modern CSS and practical UX-focused UI structure
- Worked with browser APIs, client-side validation and integration logic

- Integrated frontend apps with REST backends and authentication/session flows
- Optimized page load and runtime performance in browser environments
- Used React in internal tools, frontend integration and building practical UI components
- Used Tailwind CSS for building responsive and maintainable internal UI

Professional Experience

Senior Fullstack Engineer (Node.js / TypeScript)

Multiple commercial projects

Production Systems · Data Architecture · Internal Platforms

Node.js

TypeScript

REST

OpenAPI

MySQL

PostgreSQL

MongoDB

Redis

Couchbase

React

HTML

CSS

Tailwind CSS

Designed and implemented backend services, data models and internal fullstack systems across multiple production environments.

Email Campaign Platform (Mailchimp-like)

- Designed and implemented system architecture for email campaign management
- Built campaign scheduling and configuration logic
- Implemented subscriber management and segmentation rules
- Designed data storage and indexing strategies for large contact datasets
- Developed internal tools and dashboards for configuration and monitoring

Backend & Data Systems

- Designed REST APIs and service layers with clean separation of concerns
- Implemented modular architecture patterns for long-term maintainability
- Implemented API documentation and contract definition using OpenAPI specifications
- Optimized database queries and indexing strategies
- Built internal automation tools to streamline development and operations

Frontend Interfaces

- Built responsive UI for internal management workflows
- Used React in internal tools, frontend integration and building practical UI components
- Implemented reusable UI components and consistent styling approach
- Used Tailwind CSS for building responsive and maintainable internal UI
- Integrated frontend with backend APIs and validation logic

Engineering Strengths

- Strong architectural thinking and long-term system vision
- Deep understanding of relational and NoSQL data modeling
- Ability to translate business requirements into scalable technical solutions

- Focus on maintainability, clarity and clean structure (both backend and UI)
- Comfortable taking ownership of technical decisions end-to-end
