

Anton Zarubin

Senior Software Engineer

Node.js · TypeScript · Backend Architecture · Performance Engineering

anton.zarubin@gmail.com · +380 666 25 11 77 · zarant77.github.io · GitHub · LinkedIn

Senior Software Engineer with 20+ years of commercial experience designing and building production backend systems, APIs and performance-critical services. Strong architectural mindset with background in scalable systems, modular design and internal platform development.

Core Technologies

Node.js

TypeScript

REST APIs

System architecture

Microservices

SQL / NoSQL databases

Performance optimization

CI/CD

Docker

Internal tooling

Architecture & System Design

- Design of modular backend architectures with clear separation of concerns
- API design and contract-driven development
- Performance optimization and bottleneck analysis
- Internal platform and tooling development
- Scalable service design under real production load

Professional Experience

Senior Software Engineer

2003–Present

Backend / Fullstack · Production Systems

Node.js

TypeScript

REST

Databases

Docker

CI/CD

Designed and implemented backend services, APIs and internal tooling across multiple commercial projects.

Backend Systems

- Designed REST APIs and service layers
- Implemented modular backend architecture patterns
- Optimized database interactions and query performance
- Built internal tools to automate repetitive workflows

Performance Engineering

- Analyzed and resolved performance bottlenecks
- Improved response times and system stability
- Applied architectural refactoring for scalability

Engineering Strengths

- Strong architectural thinking and systems mindset
- Ability to design reusable internal tooling
- Clear separation between business logic and infrastructure
- Production-oriented engineering approach
- Focus on reliability, maintainability and performance
