

Anton Zarubin

Senior Software Engineer

Fullstack · Node.js · TypeScript · React · Architecture · Data Systems

- GitHub: <https://github.com/zarant77> · LinkedIn: <https://www.linkedin.com/in/zarant77>
- Upwork: <https://www.upwork.com/freelancers/~01d67a6a38050609ab>

Software engineer with 20+ years of programming experience and 10+ years of production Node.js development. Designed and implemented backend systems using Node.js and TypeScript, with strong emphasis on modular architecture, data modeling and scalable service design. Experienced in building fullstack applications including React-based frontend (dashboards, internal tools) with modern CSS approaches such as Tailwind. Strong focus on maintainability, performance and clean system design. Comfortable taking ownership of technical decisions and building systems end-to-end.

Core Technologies

Node.js TypeScript JavaScript (ES6+) React REST APIs OpenAPI (Swagger)

System architecture MySQL PostgreSQL MongoDB Redis Couchbase HTML5

CSS3 Tailwind CSS Responsive layout Browser APIs Docker CI/CD Internal tooling

Architecture & System Design

- Design of modular architectures with clear separation of concerns
- API design and contract-driven development
- API documentation and contract definition using OpenAPI (Swagger)
- Database schema design and data modeling (SQL + NoSQL)
- Designing systems from scratch based on business requirements
- Technical decision making and architectural ownership

Fullstack Scope

- Built React-based dashboards and internal tools for operational workflows
- Implemented responsive UI using modern CSS approaches (Tailwind, component-based styling)
- Designed clean and maintainable UI structure with focus on usability

- Integrated frontend apps with REST APIs, authentication and session flows
- Worked with browser APIs, validation logic and client-side state handling
- Optimized performance both on backend and in browser runtime
- Experience building SaaS-like internal tools and data-driven dashboards

Professional Experience

Senior Fullstack Engineer (Node.js / TypeScript)

Multiple commercial projects

Production Systems · Data Architecture · Internal Platforms

Node.js

TypeScript

REST

OpenAPI

MySQL

PostgreSQL

MongoDB

Redis

Couchbase

React

HTML

CSS

Tailwind

Designed and implemented backend services, data models and internal fullstack systems across multiple production environments.

Email Campaign System (Mailchimp-like)

- Designed and implemented system architecture for email campaign management
- Built campaign scheduling and configuration logic
- Implemented subscriber management and segmentation rules
- Designed data storage and indexing strategies for large contact datasets
- Developed internal dashboards and tools for configuration and monitoring

Backend & Data Systems

- Designed REST APIs and service layers with clean separation of concerns
- Implemented contract-driven APIs using OpenAPI specifications
- Optimized database queries and indexing strategies
- Built modular architecture patterns for long-term maintainability
- Developed internal automation tools to streamline workflows

Frontend Interfaces

- Built React-based responsive UI for internal management workflows
- Implemented reusable UI components and consistent styling approach
- Used Tailwind CSS for fast and maintainable UI development
- Integrated frontend with backend APIs and validation logic

Engineering Strengths

- Strong architectural thinking and long-term system vision
- Deep understanding of relational and NoSQL data modeling
- Ability to translate business requirements into scalable technical solutions
- Focus on maintainability, clarity and clean structure (both backend and UI)

- Comfortable taking ownership of technical decisions end-to-end
- Performance-oriented mindset and experience optimizing systems under load
